

Customs and Border Protection (CBP) Border Security Deployment Project (BSDP)

As America's frontline for homeland defense, U.S. Customs and Border Protection (CBP) is responsible for defending the border between the United States and Canada against the unauthorized entry of terrorists and terrorist weapons, illicit drugs, and illegal aliens.

In order to monitor and protect the nation against these unlawful admissions across the U.S. northern border, CBP engaged Sentrillion Corp. to install an intelligent video surveillance and security solution at 129 land Ports of Entry (LPOEs). Sentrillion's physical security system provides each LPOE with increased perimeter and internal security, enhanced situational awareness and personal safety for CBP officers, and a record of all port activities. Additionally, Sentrillion binds the frontline by unifying LPOEs to central command and control centers capable of monitoring port activities from remote locations. Sentrillion used a comprehensive system-of-systems approach that allowed maximum flexibility in the design of solutions for LPOE as each is unique in facility design, operational environment, and physical environmental factors.

Facility Hardening

Sentrillion improved the tiered defense systems at the LPOE by installing security gates, barriers, bollards, and lighting. Combined, Sentrillion's intelligent video surveillance solution and infrastructure improvements augment the LPOE by providing a layered defense against unauthorized entry.

Mechanized gates provide one mechanism for facility hardening which augments Sentrillion's total security solutions.

Bollards provide a second tier of facility hardening; this system, installed by Sentrillion in 2004 remains in operation under a scheduled maintenance program.

Custom, site-specific lighting is the third tier of facility hardening, providing for enhanced personnel safety, as well as improved video surveillance capabilities on-site.
