

## ***Customs and Border Protection (CBP) Border Security Deployment Project (BSDP)***

As America's frontline for homeland defense, U.S. Customs and Border Protection (CBP) is responsible for defending the border between the United States and Canada against the unauthorized entry of terrorists and terrorist weapons, illicit drugs, and illegal aliens.

In order to monitor and protect the nation against these unlawful admissions across the U.S. northern border, CBP engaged Sentrillion Corp. to install an intelligent video surveillance and security solution at 129 land Ports of Entry (LPOEs). Sentrillion's physical security system provides each LPOE with increased perimeter and internal security, enhanced situational awareness and personal safety for CBP officers, and a record of all port activities. Additionally, Sentrillion binds the frontline by unifying LPOEs to central command and control centers capable of monitoring port activities from remote locations. Sentrillion used a comprehensive system-of-systems approach that allowed maximum flexibility in the design of solutions for LPOE as each is unique in facility design, operational environment, and physical environmental factors.

## Video Surveillance System (VSS)

To increase operational awareness, Sentrillion equips each LPOE with a scalable day/night video surveillance system (VSS) and monitoring solution that provides continuous surveillance of operations, facilities, and grounds. Our systems include the use of available legacy equipment (where practical) with new components in both digital and analog formats; a wide range of proven camera components that are COTS are used and include pan/tilt/zoom (PTZ), fixed, extended range low-light cameras, and medium to long range thermal imaging camera systems.

All video captured by Sentrillion's intelligent video surveillance solutions is stored using a 16-channel DVR device. The DVR accurately stores, indexes, and documents video recordings (digital video management) within LAN/WAN environments. This capability provides inspectors with instant recall of video within a searchable database to support field investigations and litigation. Our system includes the option of synchronized audio surveillance (as specified/directed).
